

### 24V AC-DC LED DCB/Starter Light

The 24V AC-DC light was designed to light DCBs or starters easily and without fuss. It is built in the same design as our Link N Light Industrial strip light but in 1m lengths and with a 2 pin IP66 Plug. It can be operated on AC or DC voltages of 24v so it is easily run from the control circuit. It has a power of 18W @ 24V. 0.75A draw for the 1m length. Each length of strip has a built-in fuse to protect that strip. A suitably rated circuit breaker should be used to protect the cable from the supply end. It is covered in Fire resistant silicon which is self-extinguishing. The strip and plug are rated IP66.

It can be mounted by the clips supplied or cable tied to the structure or structures around. It is supplied with a 2m lead that connects to the light and can be either hard wired or fitted with a plug to connect to the starter or DCB.

Simple Plug attachment. Supplied with 2m lead. Can be hard wired into power source or plugged if required.
